sonar
THE SOUND OF THE SUBURBS

WHAT ARE YOU PREPARED TO PAY FOR A POWERFUL GEODEMOGRAPHIC CLASSIFICATION SYSTEM?

SONAR IS A PRODUCT BUILT ON INDUSTRY EXPERIENCE

HOW ABOUT IN THE NEIGHBOURHOOD OF £6,000PA.?

David Griffiths and Stuart Dagg, the joint developers of Sonar, are proven hands in data navigation. Between them they contributed to the development of the following products:

Sonar which fuses key data sources (including the 2001 Census data) is the solution for you bringing depth to your market segmentation and targeting activities at a competitive price.

- Define - launched by Infolink in 1992.
- MicroVision UK - launched by Equifax in 1995.
- MicroVision Spain - launched by Equifax' Spanish arm in 1997.
- MicroVision Eire - launched by Equifax and the Irish Post Office in 1998.
- Sonar launched by RedMoran/TRAC in 2004.

Like the market leaders, it contains clever consumer spending and activity indicators. Like them, it shines in many different environments - from CRM to list selection. But unlike these supertanker products, you don't have to pay a premium for privileged information.

HOW SONAR WORKS

The Sonar targeting system classifies households and their residents according to the type of neighbourhood in which they live. Every postcode in Great Britain is allocated to one of 80 unique neighbourhood types. The information used to produce the Sonar classification includes:

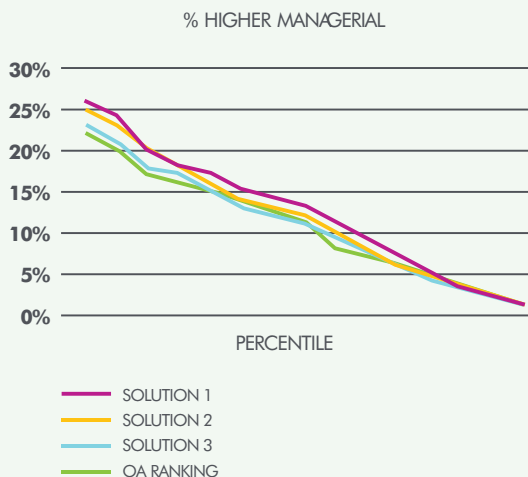

- A)** 2001 Census data
- B)** Unique postcode classifications of wealth and consumer activity
- C)** Land Registry House Price Information

The objectives of the Sonar classification are to provide a powerful and unique tool for consumer segmentation and local market planning which are highly effective at identifying the target audiences they wish to reach in a simple and easily understood way. Sonar is a product born from testing and exploring:

- Different statistical techniques
- Different combinations of variables
- Different numbers of unique clusters in the final segmentation system

In order to develop the most accurate system all potential segmentation solutions were evaluated across a range of key measures such as age, household composition, occupation, tenure, and car ownership to assess just how effectively the solution clustered attributes when compared to the theoretical degree of clustering that was possible from simply ranking the attribute directly – see Figure 1. By comparing lots of different variables in this way the most powerful and discriminatory solution was identified.

FIG. 1

HOW ARE WE PERFORMING?

In the increasingly competitive world of marketing intelligence Sonar is being successfully used by many leading UK brands including:

E-mail INFO@REDMORAN.CO.UK for more information or call 0161 926 3627.

SONAR HAS ARRIVED ON THE MARKETING INTELLIGENCE BLOCK AND WE ARE HERE TO STAY!!

Sonar is a truly unique segmentation system that divides Great Britain into 80 mutually exclusive groups according to the types of neighbourhood in which they live. The table below provides you with an overview to the classifications:

LIFESTYLE GROUP A - YOUNG SINGLES 17.4%

WEALTH QUARTILE	WEALTH RANKING	TYPE	% OF TOTAL HOUSEHOLDS	
AFFLUENT	6	A11	ASPIRING ENTREPRENEURS	2.80
